

How to refill your cartridges

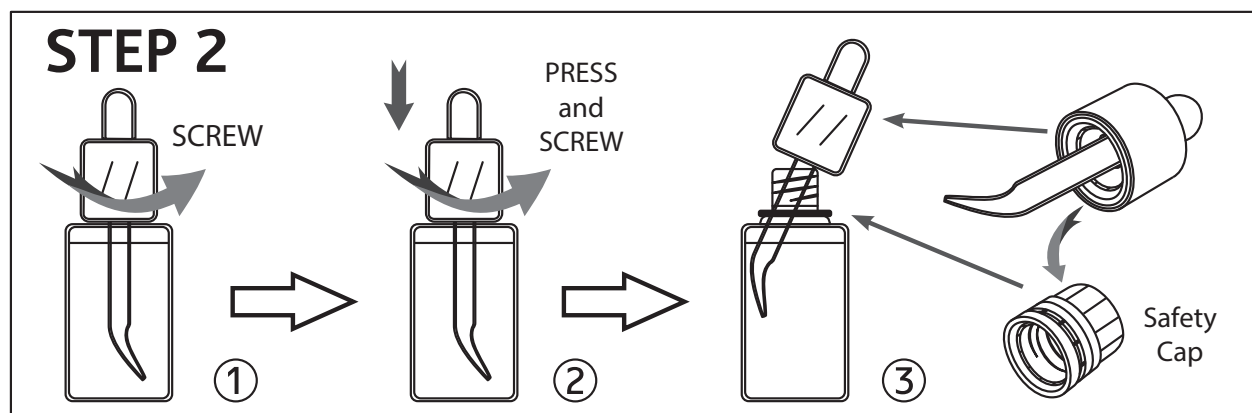

STEP 1

For Vapour 2 Classic Blanks, pop off the rubber mouthpiece cap by inserting a small implement into the hole and prying up. A paperclip works well. For Vapour 2 EX Blanks, simply unscrew the mouthpiece.

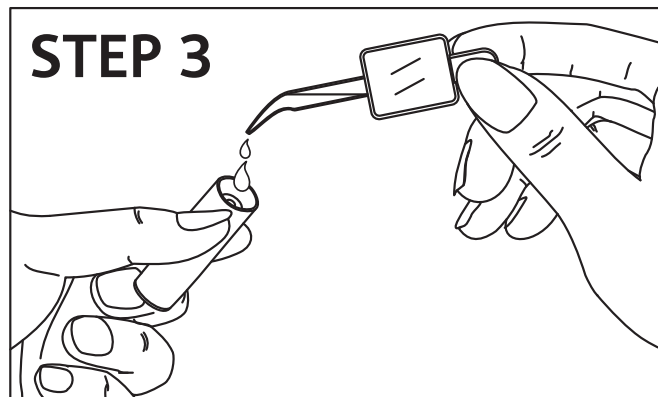

STEP 2

Open your Vapour 2 Platinum E-Liquid bottle. The bottles have a safety seal. To open, turn the cap counterclockwise until you hear a click. Then press down and continue turning counterclockwise until open.

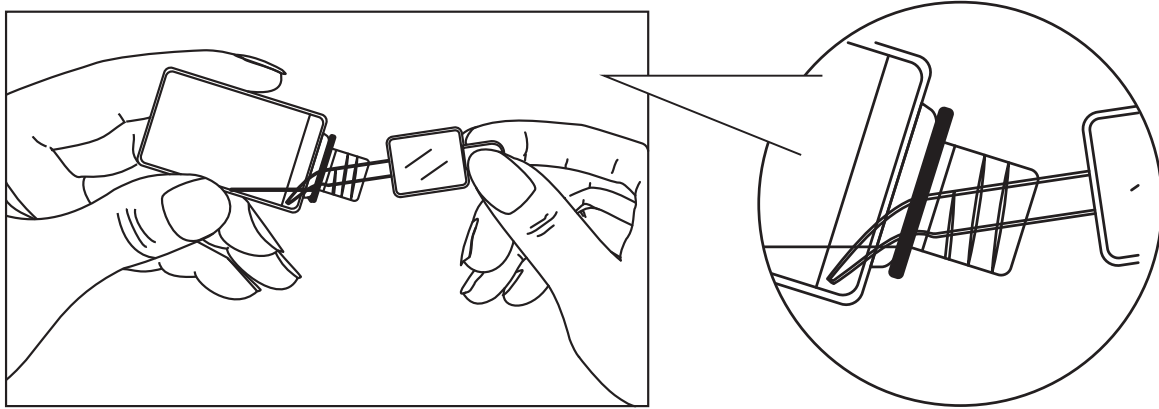

STEP 3

Carefully add Vapour 2 E-Liquid to your cartridge by filling the dropper and dripping slowly around the inside edge of the cartridge. Do not drip juice into the center pole of the cartridge. For Vapour 2 Classic Blanks,

you will use approximately 15-18 drops of e-liquid the first time you fill your blank. After doing so, you should see that the filler is completely saturated. Replace the rubber cap and wipe off any excess liquid. It is recommended to let the cartridge sit approximately 30 minutes before use. For Vapour 2 EX Blanks, drip the desired amount of e-liquid into the cartridge using the gauge on the side. Do not fill beyond full line.

Tilt the bottle carefully when your Vapour 2 E-Liquid is running low and carefully extract the remaining liquid with the dropper.

Store in a cool dry place and do not freeze. Improper storage will cause Vapour 2 E-Liquid to lose flavor.
